

HYDROSPORTS

RAPID WATER PENETRANT FOR BROADACRE TURF

- **Saves water and application costs**
- **Reduces losses through run-off and evaporation**
- **Improves penetration and infiltration of applied irrigation water through thatch soil profiles in recreational turf**
- **Immediate watering-in is generally not required**
- **Hydrosports is suitable for regular application with irrigation or fortnightly as required**

Directions for use

<i>Situation</i>	<i>Application Rate</i>	<i>Critical Comments</i>
Turf Management Injection	1.8Ltr per Hectare 3.6Ltr per Hectare 0.9Ltr per Hectare	Apply monthly or as required throughout growing season For more demanding areas For application every two weeks
Conventional Sprayers	24mL per 100sq. Mtr 2.4Ltr per Hectare	Apply in at least 4Ltrs water per 100sq/m ie 0.6% soln Apply in at least 400Ltrs water per Hectare Follow normal irrigation schedule Apply monthly or as required throughout growing season

Hydrosports does not usually require watering-in following application, however turf should be irrigated before next mowing

If applied in very dry conditions follow up with watering-in

Tank Mixing	190mL per 100Ltrs	Hydrosports is compatible with most chemicals, however, effect of the mix <i>must</i> be tested on turf to determine if safe to use.
