Uses & Features:

NX-PRO 29-0-10 is an excellent product for use when a traditional 6:0:2 type product with an economical cost is desired. Designed for use on golf course fairways and other well maintained turf areas, applications are normally geared to deliver anywhere from 0.5 to 2.0 lbs nitrogen per thousand square feet. NX-PRO 29-0-10 is augmented with 36% MESA, an economical slow-release nitrogen source which relies on microbial activity to extend the brilliant color response of ammonium sulfate. Typically, a fertilizer with a given percentage of MESA will outperform a similar fertilizer with a higher percentage of sulfur coated urea. Ideal for situations where zero phosphorus is desired.
