

Key points

- Excellent overall turf quality
- Winter hardiness
- Superb drought tolerance
- Rapid spring green-up
- Vigorous establishment from seed
- Aggressive divot recovery
- Tolerant to high levels of intensive wear

Characteristics and areas of use

Sovereign is a high quality Bermudagrass developed primarily for cold tolerance and turf quality. Sovereign is a 4 clone synthetic hybrid bermudagrass.

Sovereign displays the fine texture and green colour sought after for Bermudagrasses and tolerates low cutting heights, along with exceptional cold tolerance. Sovereign is recommended for golf tees, fairways, roughs, sports fields, parks and lawns.

Sowing rate

New sowings 1–2 kg/100m²
Repairs to existing turf 250–500 g/100m²

Sovereign should be planted when soils are consistently above 18°C in full sun on well-drained soil. The seed cannot be covered with too much soil – no more than 1.91cm of soil covering the seed is recommended. Maintain soil moisture around the seed for 2-3 weeks for optimal germination success.
