Key points

- Winter active
- Highly rhizomatous
- Fine leaf texture
- Suitable for racetracks, parklands, sports ovals

Characteristics and areas of use

Torpedo 2 is a winter active, highly rhizomatous tall fescue with medium-fine leaf texture that spreads and self repairs through extensive underground rhizomes. Unlike traditional tall fescue which has broad leaves, Torpedo has finer leaves and an upright growth habit making it ideal to use in racetracks and to mix with perennial ryegrass.

Torpedo 2 is suited to use in racetracks, parklands, secondary ovals and erosion control where the self repairing rhizomatous nature of Torpedo 2 aids in surface stability.

Breeding history

Torpedo 2 is the second generation of winter active rhizomatous tall fescues selected from the original Torpedo. The original plants came from North West Spain.

Sowing rate

Torpedo 2 tall fescue can be sown in parklands, racetracks, and general purpose turf at 40-50 g/m² or 400-500 kg/ha. Use the higher seeding rate for racetracks and where more rapid establishment is required. Lower seeding rates are possible for erosion control and ground cover in mixtures.
